

Nothing is More Important to Us than Patient Safety

We have always followed strict OSHA-mandated protocols to maintain a highly sterile environment within our dental office. These guidelines were created to safeguard against the spread of highly contagious diseases such as tuberculosis and measles, and they are equally effective in managing the spread of influenza and coronavirus.

Due to heightened concerns, we have added the following safeguards to ensure patient safety:

- Requesting patients complete COVID-19 Pre-Screening Interview and temperature check
- Rescheduling patients identified to have risk factors (recent travel, illness, health conditions)
- Hand sanitizer available in waiting area and all operatories
- Twice hourly disinfecting of lobby area and restroom
- Practicing social distancing of employees and patients outside of treatment areas

In addition we advise our patients and employees to follow the advice published by the Centers for Disease Control and Prevention:

- Avoid close contact with people who are sick
- Stay home when you are sick, except to get medical care
- Cover your coughs and sneezes with a tissue
- Avoid putting your hands on your face
- Clean frequently touched surfaces and objects daily
- Wash your hands often with soap and water. If soap and water are not readily available, use a hand sanitizer that contains at least 60% alcohol
